JULY 2026

FP APOLLO MULTI ASSET CAUTIOUS FUND

FUND AIMS

The Fund aims to achieve a positive return over a rolling period of 5 years, which is 3% (net of fees) above normal cash deposit rates. For these purposes, normal cash deposit rates should be taken to mean the UK Operational Standing Deposit Facility Rate. The Fund will pursue a cautious investment strategy and can invest indirectly (via collective investment schemes, investment trusts and exchange traded funds) in a range of assets including listed shares, fixed interest securities, money market instruments and cash/deposits. The Fund may also seek investment diversification by obtaining indirect exposure to alternative asset classes including hedge funds, private equity, commodities and indirectly in property.

FUND REVIEW AND OUTLOOK

Global markets experienced a volatile July as investors reassessed the outlook for artificial intelligence-related growth, inflation and monetary policy. After a prolonged period of strong performance, semiconductor stocks came under significant pressure as investors questioned elevated valuations and rotated away from some of the year's strongest performers. At the same time, geopolitical tensions and uncertainty surrounding global trade continued to weigh on market sentiment, particularly across Asia and Emerging Markets, where technology and semiconductor companies have become an increasingly important driver of index performance. Despite the market weakness, the broader macroeconomic backdrop remains supportive, with resilient economic growth and easing inflation expected to underpin corporate earnings over the medium term.

Against this backdrop, the FP Apollo Multi Asset Cautious Fund was down 1.09% during the month[1]. The decline primarily reflected weakness across growth-oriented equity markets following the reversal in the AI trade, although the funds allocation diversified asset allocation helped mitigate some of the broader market volatility.

The iShares MSCI World Value Factor ETF, which surrendered part of its exceptional year-to-date gains as its semiconductor exposure was impacted by the sharp rotation away from AI-related companies. Asian and Emerging Market holdings also weakened as technology-led markets retraced following a period of exceptional performance. While disappointing in the short term, we continue to view this as a correction within a longer-term structural growth trend rather than a deterioration in the underlying investment case.

During the month, we selectively trimmed profits across several global equity holdings that had performed strongly earlier in the year. Capital was partly redeployed into a new position in the Henderson Global Smaller Companies Fund, reflecting our conviction that global smaller companies offer attractive long-term value. As artificial intelligence adoption broadens beyond the technology sector, we believe smaller businesses are well placed to benefit from increased productivity, operational efficiencies and enhanced profitability, while continuing to trade at attractive valuations relative to larger-cap peers.

The portfolio remains well diversified across regions, sectors and investment styles. We continue to focus on identifying attractively valued opportunities while positioning the Fund to benefit from a broadening of market leadership beyond the narrow group of companies that has dominated returns over recent years.

RISK PROFILE

1	2	3	4	5	6	7	8	9	10

Fund has been assigned a risk category of 4 which categorises an investor with a low attitude to accepting risk, who is concerned about the possibility of losing money but does not want to completely ignore the possibility of making higher returns. The investor will probably want greater returns than are offered by bank accounts and other low risk investments. Consequently, the investor will be prepared to accept some fluctuation in the value of their capital and accept that they could make a loss on the amount invested, particularly in the short term.

Target Volatility: 5 – 7%
Target Return: Cash + 3%
